WIRESHARK SNIFFER

Ex No:09

Date:09-05-2023

Aim:

- TO use WireShark sniffer tool to capture and analyse traffic.

Procedure:

1. Install and open Kali Linux.
2. Open the wireshark sniffer tool.
3. Connect to a network.
4. Open any website.
5. Now in the tool click on the connection type (Example eth0).
6. Now click on capture and start capturing the data.
7. We can filter the packets too in filter search bar.
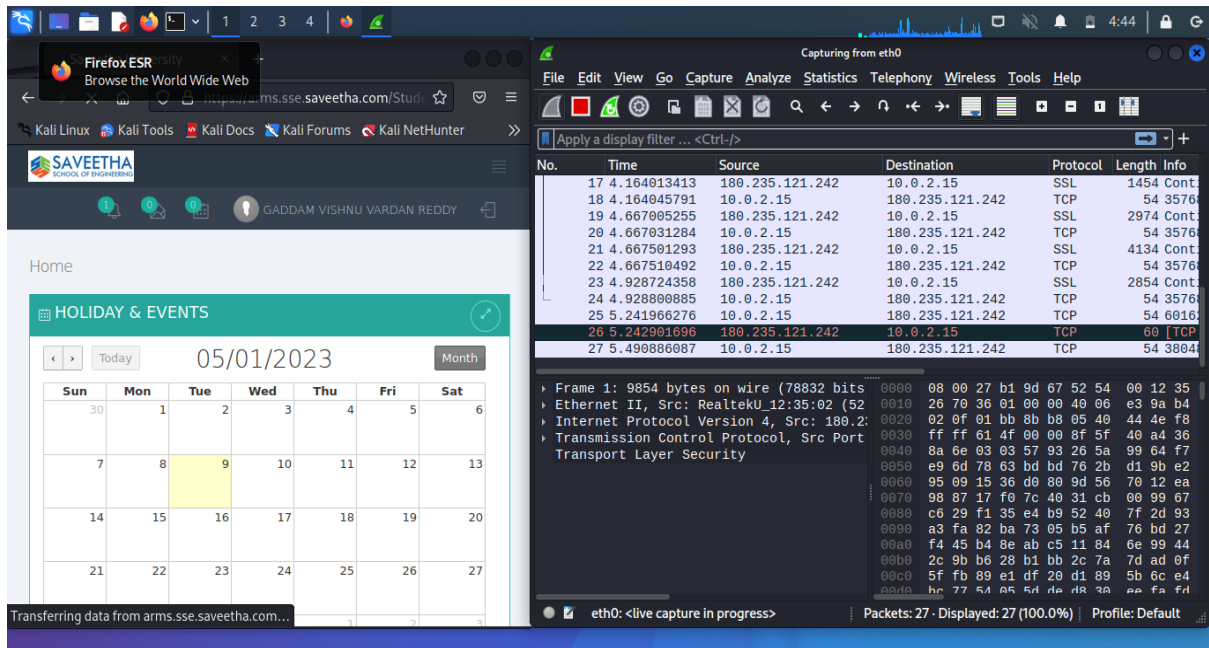

Output:

Wireshark tool
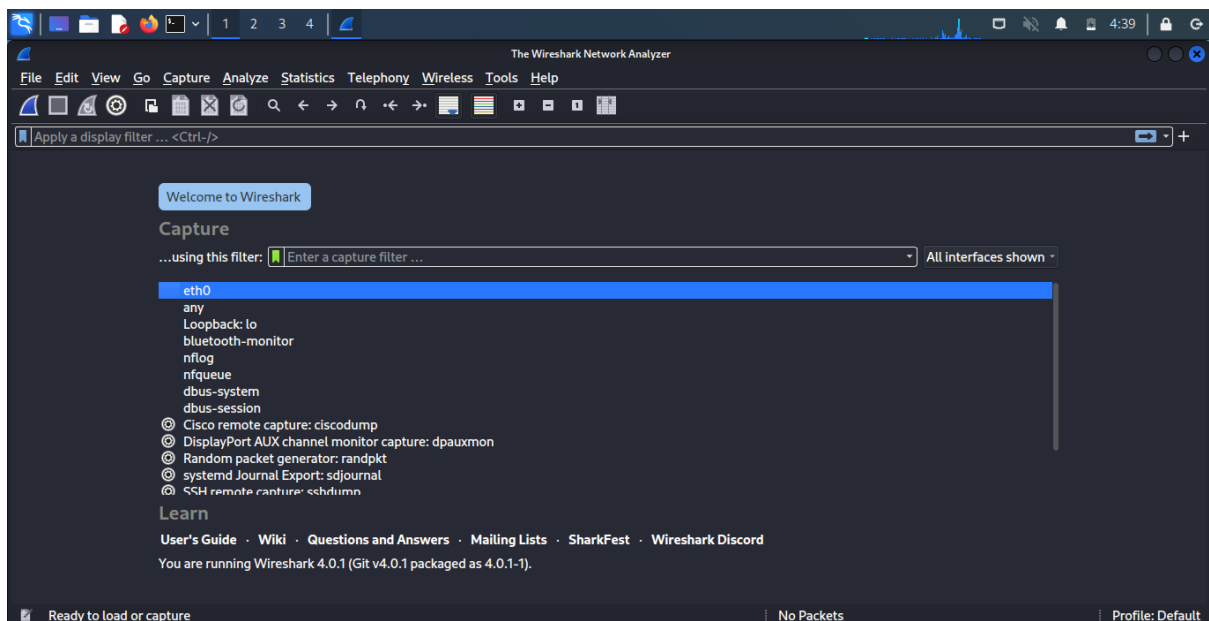

Open any website or domain
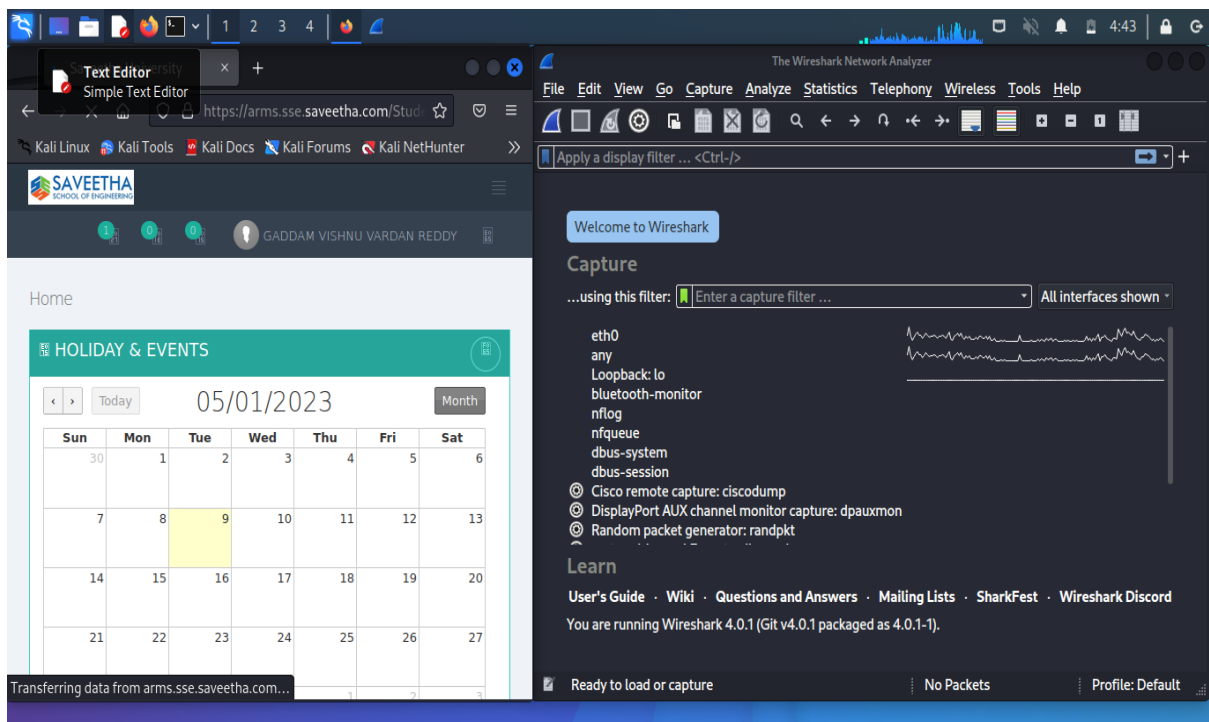

Click on capture

You can see all the packets that are being transferred

You can filter those packets too (Example TCP)

Result

Hence using WireShark sniffer tool traffic has been analysed and captured.
